### **State Operations Center**

Normal Operations

### **Inland Region EOC**

Normal Operations

### **Coastal Region EOC**

Normal Operations

### **Southern Region EOC**

Normal Operations

#### **Multiple Earthquakes, SW of Port Alice, British Columbia**

On 10/21/18 at 2240 hours, a 6.6 magnitude earthquake occurred 135 miles southwest of Port Alice, British Columbia

- A second earthquake, 6.8 magnitude, occurred at 2317 hours at the same location.
- A Tsunami Information Statement was submitted by the Tsunami Warning Center.
- There was no threat of a tsunami to the California Coastline.
  - The EQTP Duty Officer advised the Tsunami Information statements indicated that there was no risk to California.
  - Aftershocks are to be expected with several possible at one magnitude lower than the mainshock which at this point would be 6.8M.
  - Events this far from California do not increase the earthquake risk.
- All coastal counties and delta regions were verbally briefed

#### **Cal OES INLAND REGION**

- Nothing significant to report.

#### **Cal OES COASTAL REGION**

- Nothing significant to report.

#### **Cal OES SOUTHERN REGION**

- Nothing significant to report.

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

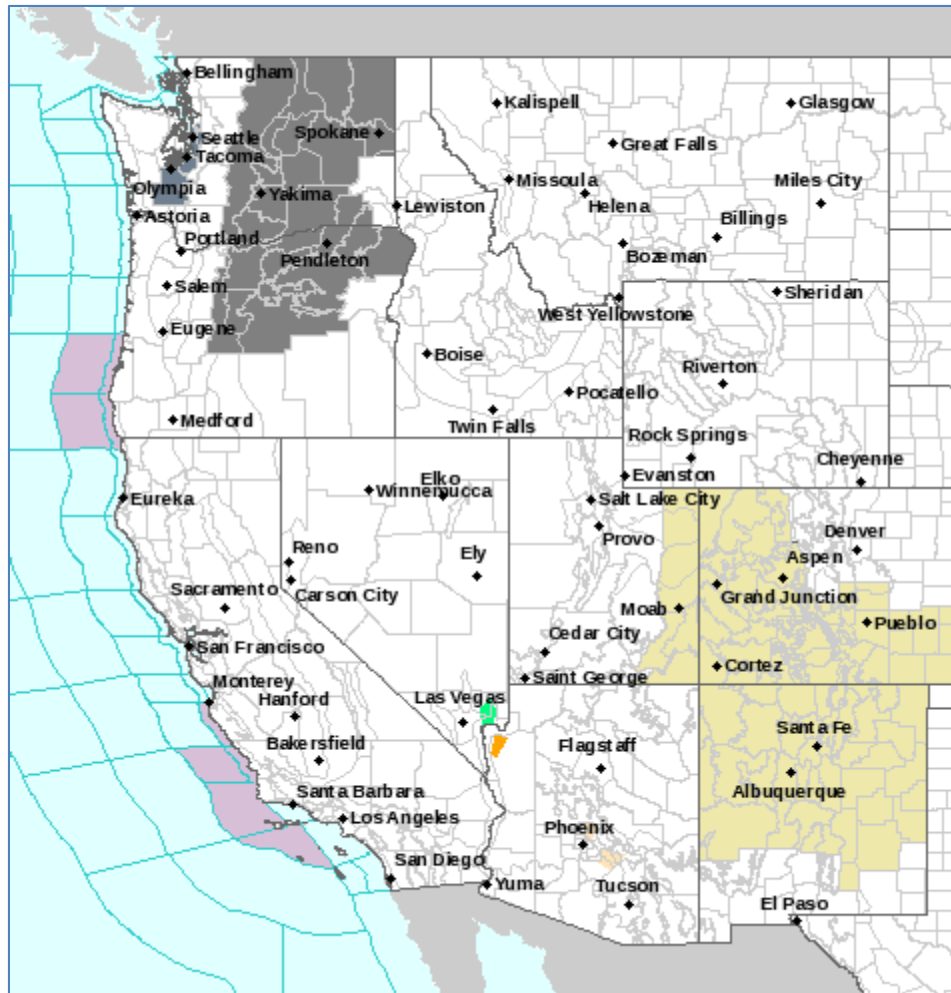

- Low Humidity Most Areas through today
- High pressure will be the dominate weather feature next 7 days, although a low pressure area will produce some instability through today.
- Wind speeds generally on the lighter side through the week although there will be periods of localized gusty W-SW-S wind favoring Tuesday and a period of downslope N-NE wind Wednesday night-Thursday.
- Gustier breezes affecting more of the area possible by next weekend.
- Temperatures above normal by 5-15 degrees next 7 days most areas although slight cooling will occur Tuesday-Wednesday, significant warming by next weekend.
- Deepening onshore flow early week will lead to higher humidity, especially impacting western areas.
- Periods of light precipitation will be possible across the far NW during the next 7 days, otherwise the area looks to be devoid of precipitation chances.

## **SOUTHERN CALIFORNIA**

- A weak area of low pressure will sit over California through Monday and then move off to the east Tuesday. A ridge of high pressure will build into California from the southwest Wednesday through the end of this week. This ridge of high pressure will weaken next weekend.
- Isolated to scattered showers and thunderstorms will form over the mountains and deserts through this afternoon.
- Most mountain and desert locations will receive little or no rainfall, but isolated locations over the Sierra Crest and near the Nevada Border will receive up to an inch of rainfall through this afternoon.
- Maximum temperatures will be near to a little above normal through Tuesday, with upper 50s and 60s across the mountains and mid 70s to mid 80s in the valleys.
- Minimum humidity will be mainly above 20% across the region through Tuesday.
- Temperatures will warm Wednesday through the end of this week, with temperatures 5 to 10 degrees above normal Thursday and Friday.
- Minimum humidity will be mainly between 12% and 25% Wednesday through Friday.
- A little cooling along with a little increase in humidity will take place next weekend.
- Winds will be light through next weekend.
